U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Continuation of 11. does NOT place the application in condition for allowance because: Thorland teaches checking the connection status by receiving a command (test signal) only for a 'certain period of time' as shown in col. 9, lines 18-28 After elapsing the certain period of time, whether the command is received or not, an LED indicates the status. The certain period of time run by the software/hardware (controller) is not an arbitrary/uncertain/indefinite value for the software/hardware waiting for receiving the command. In other words, the software/hardware should have a mechanism (counter) to measure (increase) the certain period of time reached/elapsed or not.
